WHY SACFA GAUTENG NEEDS FUNDS

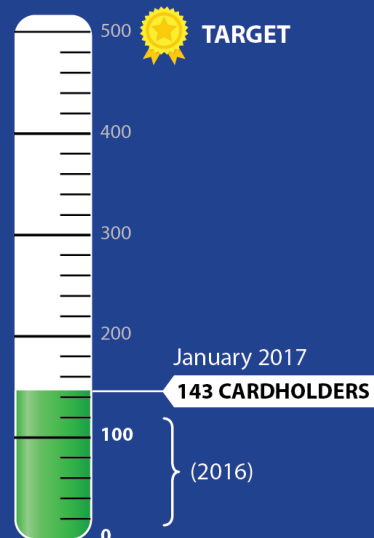

Cystic Fibrosis is one of the most common inherited disorders. It affects mainly the lungs and digestive system, but may affect several other organs.

Treatment is highly specialised, and due to limited state assistance, **the local Cystic Fibrosis Association supports both the childrens' and adult clinics in Johannesburg and Pretoria.** Public awareness of the disorder is poor in South Africa and as a result it is believed to be under-diagnosed across all race groups.

SACFA aims to promote awareness/diagnosis, give affected families psychological support and ensure that all patients receive proper treatment.
